

## Legend for Pro/INTRALINK Overview

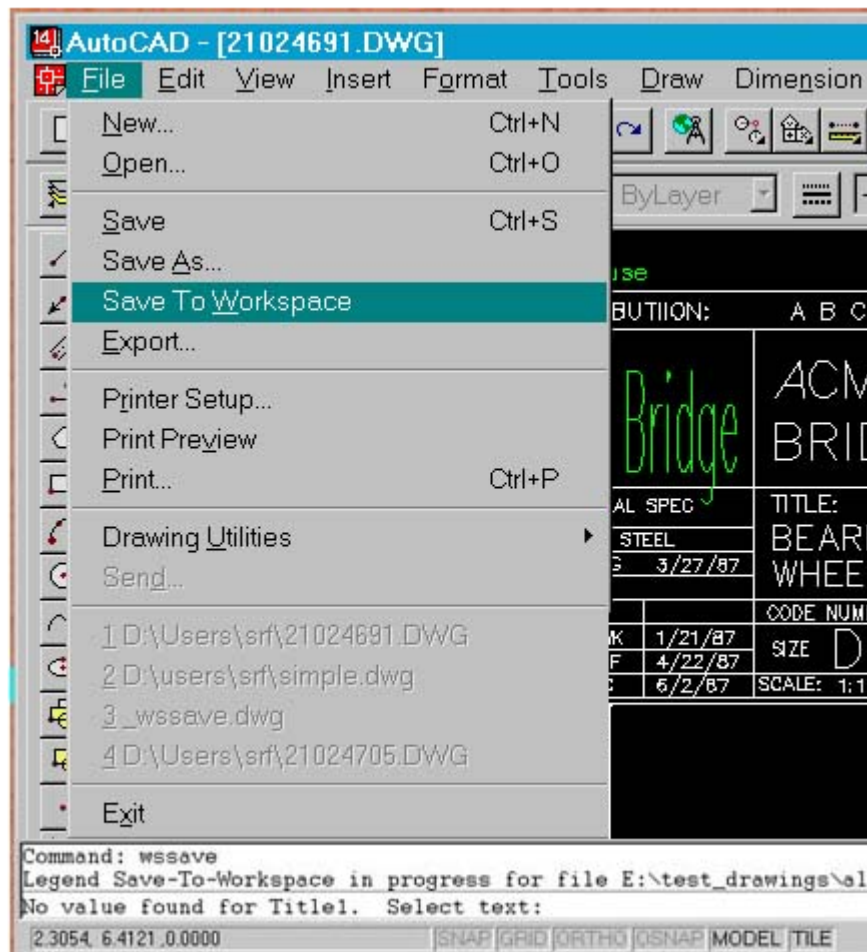

### Increase the Value of Pro/INTRALINK

Pro/INTRALINK (Pro/I) has a proven track record for departmental control of Pro/ENGINEER (Pro/E) models. However, because an estimated 50 percent of Pro/E customers still maintain a limited AutoCAD presence, consolidated controls are needed. Legend for Pro/I is a loader product that handles the migration of multiple file formats, such as AutoCAD, Pro/E, Microsoft Office and Adobe Acrobat.

By expanding the span of control for Pro/I, technical and non-technical users have a central repository for CAD drawings, models, and associated office documents within a secure environment. The use of Pro/I to manage multiple file types produces immediate business results by delivering value to the user community with minimal cost impact.

### Legend Desktop (LDT) bi-directional association between CAD Files

[Legend Desktop](#) automatically updates the PDM environment with any changes made in the CAD file and updates the CAD file when changes are made to a file in Pro/I. This bi-directional association reduces the workload involved in altering designs and creates a more efficient and controlled business environment.

Legend reduces completion time for migration projects from months to days by providing a structured knowledge transfer process that fosters customer independence. Additionally, companies that deploy Legend capitalize on their intellectual capital by unlocking and maximizing the value of historical CAD information.
